

POSEIDON™

PELLETS

Phosphorus adsorbing pellets

DIRECTIONS FOR USE

Designed for application in aquatic systems to diminish phosphorus levels and enhance water quality, Poseidon Pellets serve the purpose of eliminating specified oxyanions in diverse natural settings with flowing water, such as rivers, drains, and channels. Additionally, they find utility in artificial environments, participating in the treatment of waste effluents like municipal wastewater, leachates, and processing effluents.

To deploy Poseidon Pellets effectively, they should be enclosed in a water-permeable container, such as a sock boom, wire cage, or filter basket, prior to use. In natural surroundings, Poseidon Pellets can be submerged in flowing water. Conversely, in artificial environments, waste effluents can be directed through the pellets at the recommended flow rate.

PRODUCT OF THE USA.

Not classified as hazardous.

PRECAUTION

Avoid ingestion, inhalation, contact with eyes and skin. Breathing dust may be irritating.

- **NON FLAMMABLE**
- **5 GALLON PAIL WITH FILTER BAG**
- **INSTRUCTIONS FOR STORAGE: KEEP DRY**
